Art Unit: 1711

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 12, 13, 17 and 19-21 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Ruetman.

Ruetman discloses an aqueous polyurethane dispersion comprising a prepolymer made from cycloaliphatic diisocyanate and polyosypropylene glycols and triols (see example 1). He chain extends with a diamine. At the top of col. 9, he discloses making the prepolymer of the polyether polyols, diisocyanate and ionic component at NCO/OH ratios of 1.1 to 3. If the prepolymer of example 1 had been made at an NCO/OH ratio of 1.1 (by reducing the amount of diisocyanate and leaving the amounts of the other components the same), the prepolymer would have an NCO content of about 4 if made without the ionic component. When a reference shows a product that appears to be the same as one set forth in a product-by-process claim although produced by a different process (the ionic component reacted at a different time in the reaction sequence), the burden of proof is shifted to the applicant (see In re Marosi, 218 USPQ 289 and MPEP 2113).

Application/Control Number: 10/677,882 Page 3

Art Unit: 1711

4. Claims 22-24 and 26 are objected to for depending on rejected claims.

5. Applicant's arguments filed 6-2-05 have been fully considered but they are not persuasive. The applicants argue that Ruetman doesn't show the same NCO/OH ratio for the ratio of isocyanate to OH of the high and lower molecular weight polyols and therefore, wouldn't obtain a prepolymer having 2-4 wt. % if the ionic component were excluded. The above rejection shows this not to be the case.

6. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rachel F. Gorr whose telephone number is 571-272-1072. The examiner can normally be reached on Mon., Tues., Thurs., Fri., from 7:00 AM to 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jim Seidleck can be reached on 571-272-1078. The fax phone
